Mechanical Circulatory Support Therapy in Advanced Heart Failure

This engaging book provides a state-of-the-art introduction to the rapidly evolving field of mechanical circulatory support therapy in the care of patients with advanced heart failure. It is aimed at healthcare teams around the world who are involved in patient care, research, and teaching of advanced heart failure; healthcare professionals in training; and interested lay persons. In particular, this book serves as a comprehensive resource and practice guide on all aspects of mechanical circulatory support therapy, starting with an overview on heart failure management and then continuing with the referral and evaluation, the care before and after mechanical circulatory support implantation, the analysis of outcomes and complications, as well as a description of research and societal perspectives in the field of mechanical circulatory support therapy. It is founded on the expertise of Columbia University Medical Center (New York City), which has one of the most renowned heart failure, mechanical circulatory support, and heart transplantation programs in the world. It takes a multidisciplinary integrated healthcare team approach, including the perspectives of cardiologists, cardiac surgeons, nurses, coordinators, social workers, psychologists, physical therapists, financial experts, and bioethicists; and it provides in a unique way the complementary viewpoints from the expert healthcare team's as well as the patient's and family's perspectives, with patient vignettes interspersed throughout the entire text.

Vaccine Development and Manufacturing

Vaccine Manufacturing and Production is an invaluable reference on how to produce a vaccine - from beginning to end - addressing all classes of vaccines from a processing, production, and regulatory viewpoint. It will provide comprehensive information on the various fields involved in the production of vaccines, from fermentation, purification, formulation, to regulatory filing and facility designs. In recent years, there have been tremendous advances in all aspects of vaccine manufacturing. Improved technology and growth media have been developed for the production of cell culture with high cell density or fermentation. Vaccine Manufacturing and Production will serve as a reference on all aspects of vaccine production by providing an in-depth description of the available technologies for making different types of vaccines and the current thinking in facility designs and supply issues. This book will provide insight to the issues scientists face when producing a vaccine, the steps that are involved, and will serve as a reference tool regarding state-of-the-art vaccine manufacturing technologies and facility set-up. Highlights include: Comprehensive coverage of vaccine production : from a process point of view- fermentation to purification to formulation developments; from a production point of view - from facility design to manufacturing; and from a regulatory point of view - requirements from government agencies Authors from different major

pharmaceutical and biotechnology companies Describes the challenges and issues involved in vaccine production and manufacturing of the different classes of vaccines, an area not covered by other books currently on the market

Textbook of Transplantation and Mechanical Support for End-Stage Heart and Lung Disease, 2 Volume Set

Textbook of Transplantation and Mechanical Support for End-Stage Heart and Lung Disease Comprehensive textbook covering all aspects of the care of patients with advanced heart or lung disease Transplantation and Mechanical Support for End-Stage Heart and Lung Disease is the most comprehensive and contemporary textbook available that addresses the medical and surgical treatment options for patients with end-stage heart and lung disease. All facets of these complex and resource-intensive therapies are covered by leading experts — including the basics of transplant immunology, databases, regulatory and ethical aspects of transplantation and conventional and new modalities of donor organ harvest. Transplantation and Mechanical Support for End-Stage Heart and Lung Disease includes further information on topics such as: Historical developments that facilitated heart and lung transplantation; engineering advances in continuous flow technologies Transplant organizations, oversight, structure, process, databases and registries in the thoracic transplants and MCS field Current strategies in immune modulation, desensitization protocols and mechanisms of allograft rejection and tolerance/immunosenescence Detailed descriptions of donor and recipient surgical procedures as well as comprehensive implantation techniques for all available short- and long-term mechanical circulatory support devices, including ECMO Organ allocation and prioritization, donor evaluation, high risk donors, marginal donors, and risk assessment Richly enhanced with summary tables and color illustrations to provide an engaging and supportive learning experience, the book will serve as a highly valuable source of contemporary knowledge for medical students, residents, nurses, perfusionists, physicians and surgeons involved in the care of these desperately ill group of patients. “This comprehensive book covers all aspects of advanced heart and lung failure treatment, including shock, short-term and durable mechanical assistance, as well as transplantation. The in-depth information will be welcome by newcomers in the field as well as seasoned veterans.” —Andreas Zuckermann, M.D Vice-Chair, Department of Cardiac Surgery, Director of Cardiac Transplantation Program, Medical University of Vienna, Vienna General Hospital “This comprehensive tour-de-force compendium covers practical issues of clinical administration, program development, care pathways, ongoing challenges and opportunities in each treatment area as a must go-to reference for guidance in the rapidly evolving fields of mechanical circulatory support and transplantation.” —Mandeep R. Mehra, MBBS, MSc, FRCP Executive Director, Center for Advanced Heart Disease, Brigham and Women’s Hospital, Harvard Medical School “This unique textbook authored by key opinion leaders is a refreshing 'wind of change' in our field, one that will well serve all professionals involved in the care of end-stage heart and lung patients for many years to come.” —Marcelo Cypel MD, MSc, FACS, FRCSC Surgical Director Ajmera Transplant Centre at UHN , University of Toronto

Advances in Computers covers new developments in computer technology. Most chapters present an overview of a current subfield within computers, with many citations, and often include new developments in the field by the authors of the individual chapters. Topics include hardware, software, theoretical underpinnings of computing, and novel applications of computers. This current volume emphasizes information security issues and includes topics like certifying computer professionals, non-invasive attacks (\"cognitive hacking\"), computer files as legal evidence (\"computer forensics\") and the use of processors on plastic (\"smartcards\"). The book series is a valuable addition to university courses that emphasize the topics under discussion in that particular volume as well as belonging on the bookshelf of industrial practitioners who need to implement many of the technologies that are described. In-depth surveys and tutorials on new computer technology Well-known authors and researchers in the field Extensive bibliographies with most chapters Five out of seven chapters focus on security issues Discussion of computer forensics, professional certification and smart cards A chapter on how DNA sequencing is accomplished is important in the growing bioinformatics field

MCSA / MCSE: Windows Server 2003 Network Security Administration Study Guide

As the population ages, the medical profession predicts that the prevalence of heart failure will continue to increase at least through 2030. Advances in medical and surgical therapy are allowing more people to survive acute cardiac events and to live longer with heart failure; however, morbidity and mortality remain high. MCS has become mainstay therapy for severe acute and chronic heart failure. Management of heart failure patients receiving mechanical circulatory support (MCS) is complex and requires care from multiple medical specialties to achieve positive outcomes. The purpose of this book is to provide comprehensive contemporary information on the management of patients with acute or chronic severe heart failure who are being treated with MCS. The main emphasis throughout this book is management based on current best practices. There are three sections: (1) Management of Acute Heart Failure, (2) Management of Chronic Heart Failure, and (3) Special Considerations in the Management of Advanced Heart Failure. The first two sections begin with overview chapters to provide a basis for the subsequent chapters. This book is a must-have resource for general Cardiologists, Heart Failure Cardiologists, Cardiac Surgeons, Intensivists, Nurse Practitioners, Nurses, Perfusionists and ventricular assist device (VAD) Coordinators. Topics covered in the text will also be of interest to Radiologists, Hematologists and Pathologists. Postgraduate trainees in cardiovascular medicine will be a key readership. Students in medicine and nursing will use this text to gather a basic understanding of the care of patient with severe heart failure.
